

COOPERATIVE ECONOMIC INSECT SURVEY REPORT

Glenn A. Salsbury, Survey Entomologist

Report 5, Volume 55

May 1, 2007

WHEAT INSECTS

ARMYWORM: Growers that have any wheat remaining should be alert for this pest. Much of the wheat has heavy growth and is beginning to lodge, an ideal situation for this pest. Damage, if it is going to occur, should be at about heading. There has been a strong moth flight within the past week in Crawford County.

HORTICULTURAL PLANTS

SCALE and **MEALYBUGS** were found on palms at one retail site in Crawford County.

THRIPS and **APHIDS** have been reported on a variety of greenhouse plants from around the state.

COLORADO POTATO BEETLE: Found feeding on eggplant at one site in Crawford County.

MISCELLANEOUS INSECTS

PAINTED HICKORY BORER: Active on recently cut mulberry logs in Crawford County.

REDHEADED ASH BORER: One beetle caught in a light trap on 30 April in Crawford County.

CORN EARWORM: One moth caught in a light trap on 30 April in Crawford County.
